

Abelia Kaleidoscope
Abelia x grandiflora 'Kaleidoscope'

Abelia Kaleidoscope is a dwarf, variegated, semi-evergreen shrub. It has color interest for all seasons. In the spring, it emerges lime green and bright yellow, with white tubular flowers. It turns golden yellow in the summer and red in the fall. It is heat and drought tolerant. It can grow 24-30 inches tall and 3-4 feet wide.

Plant Care and Watering: Abelia Kaleidoscope is easily grown in medium moisture and well-drained soil. It blooms on new wood, so prune as needed in late winter or early spring. It may need pruning every 3-4 years. It can be planted in small groups or even be used as a hedge.
